

DaDesktop

Cloud Desktops for Humans!

What is DaDesktop?

DaDesktop (DD for short) is a remote desktop environment designed for instructors and students who wish to carry out interactive, hands-on training from distant physical locations. It aims to mimic and improve on the experience of live, instructor-led training, especially IT training in corporate, institutional and educational settings. By providing each student their own machine (remote desktop) to carry out exercises and by enabling the instructor to actively monitor and guide each student, DaDesktop fosters a highly interactive, coaching-oriented style of teaching and learning never before possible outside of a physical classroom.

Why instructor-led training?

Some learning works best in the presence of a live instructor, guiding students through interactive lessons and exercises while engaging in lively discussion and Q&A. Examples of topics that are difficult to learn in the absence of a live instructor include: new technologies that change faster than the learning materials available online; custom courses adapted to the needs of a particular audience; hand-picked sections of a learning curriculum that address a narrow area of focus.

DaDesktop as a teaching and learning platform for instructor-led training

DaDesktop removes the barriers to live, instructor-led training by allowing the teaching and learning to happen remotely. The benefits of live class interaction, minus the cost and inconvenience of travel, training room reservations, event coordination, etc., are now a reality with DaDesktop!
